Changing party-systems? Wrapping-up workshop on electoral volatility Session 07

Álvaro Canalejo-Molero

University of Lucerne

Spring Term 2021-2022

- **1** Overview of the last session
- 2 A replication exercise
- 3 An empirical exercise with real world data
- 4 The empirical exercise
- **5** More on replication: what you can do
- 6 Feedback and or organization of the second block II
- References

Take-home points from Session 6:

1 There is a bunch of ways of assessing party system change, from volatility indices to compound indices of party system closure or restraint

- There is a bunch of ways of assessing party system change, from volatility indices to compound indices of party system closure or restraint
- 2 The debate on party system change has revitalized in the past years. According to some analysts, the general bias towards stability of party systems remains strong, while others suggest that some European party systems have de-institutionalized in the last decade

- There is a bunch of ways of assessing party system change, from volatility indices to compound indices of party system closure or restraint
- 2 The debate on party system change has revitalized in the past years. According to some analysts, the general bias towards stability of party systems remains strong, while others suggest that some European party systems have de-institutionalized in the last decade
- There is not a correct answer and it depends a lot on the way you conceptualize and measure party system change

- 2 The debate on party system change has revitalized in the past years. According to some analysts, the general bias towards stability of party systems remains strong, while others suggest that some European party systems have de-institutionalized in the last decade
- There is not a correct answer and it depends a lot on the way you conceptualize and measure party system change
- There is an open venue for new research and innovation!

- There is a bunch of ways of assessing party system change, from volatility indices to compound indices of party system closure or restraint
- 2 The debate on party system change has revitalized in the past years. According to some analysts, the general bias towards stability of party systems remains strong, while others suggest that some European party systems have de-institutionalized in the last decade
- There is not a correct answer and it depends a lot on the way you conceptualize and measure party system change
- 4 There is an open venue for new research and innovation!
- In this session we will move from the theory and the review of previous analyses to perform one empirical analysis ourselves

• What is replication?

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances
- Different types:

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances
- Different types:
 - Systematic repetition of the exactly same analysis over the exact same data

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances
- Different types:
 - Systematic repetition of the exactly same analysis over the exact same data
 - 2 Additional analyses over the exact same data

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances
- Different types:
 - Systematic repetition of the exactly same analysis over the exact same data
 - 2 Additional analyses over the exact same data
 - 3 Exact same analyses over different but similar data

- What is replication?
- Replication consists of the repetition of an earlier study using sufficiently similar methods and under sufficiently similar circumstances
- Different types:
 - Systematic repetition of the exactly same analysis over the exact same data
 - 2 Additional analyses over the exact same data
 - 3 Exact same analyses over different but similar data
 - 4 Additional but related analyses over different but similar data

• Important for science because of:

 - Verifiability
 - Validity

- Important for science because of:
 - Verifiability
 - Validity
 - 3 Scope conditions testing

• Why are we doing a replication exercise ourselves?

- Why are we doing a replication exercise ourselves?
- First of all, just to show that it can be done!

- Why are we doing a replication exercise ourselves?
- First of all, just to show that it can be done!
- We can test the implications of what we have seen so far, validate previous results, and maybe even discover something new

- Why are we doing a replication exercise ourselves?
- First of all, just to show that it can be done!
- We can test the implications of what we have seen so far, validate previous results, and maybe even discover something new
- We will focus on the most used indicator to assess party system change: electoral volatility

- Why are we doing a replication exercise ourselves?
- First of all, just to show that it can be done!
- We can test the implications of what we have seen so far, validate previous results, and maybe even discover something new
- We will focus on the most used indicator to assess party system change: electoral volatility
- Specifically, we will use the data produced by Vincenzo Emanuele (2015) on electoral volatility in Western Europe from 1945 to 2015

- Why are we doing a replication exercise ourselves?
- First of all, just to show that it can be done!
- We can test the implications of what we have seen so far, validate previous results, and maybe even discover something new
- We will focus on the most used indicator to assess party system change: electoral volatility
- Specifically, we will use the data produced by Vincenzo Emanuele (2015) on electoral volatility in Western Europe from 1945 to 2015
- This is one of the dataset that he and his colleagues use to analyze party system change (i.e., Chiaramonte & Emanuele, 2017)

• First of all, download an install R and RStudio

- First of all, download an install R and RStudio
- **R** is a free software environment for statistical computing and graphics with a vast collection of packages, all of them open source

- First of all, download an install R and RStudio
- **R** is a free software environment for statistical computing and graphics with a vast collection of packages, all of them open source
- RStudio is an Integrated Development Environment (IDE) specifically suited for R

- First of all, download an install R and RStudio
- **R** is a free software environment for statistical computing and graphics with a vast collection of packages, all of them open source
- RStudio is an Integrated Development Environment (IDE) specifically suited for R
- It is also free and open source!

- First of all, download an install R and RStudio
- R is a free software environment for statistical computing and graphics with a vast collection of packages, all of them open source
- RStudio is an Integrated Development Environment (IDE) specifically suited for R
- It is also free and open source!
- In addition, it supports other languages too (these slides have been done with Beamer in RStudio!)

• First step, download the latest version of R and RStudio

- First step, download the latest version of R and RStudio
- Second step, go to the website of the course and download the file replication_exercise.Rmd from the folder 07_session

- First step, download the latest version of R and RStudio
- Second step, go to the website of the course and download the file replication_exercise.Rmd from the folder 07_session
- Third step, open the file replication_exercise.Rmd with RStudio

• Look at the papers in the course bibliography

- Look at the papers in the course bibliography
- The most recent papers normally come with replication files (most high ranking journals nowadays demand these files for publication)

- Look at the papers in the course bibliography
- The most recent papers normally come with replication files (most high ranking journals nowadays demand these files for publication)
- If not, **they will refer to the data they use** somewhere in the paper and you can always google it! This usually works

- Look at the papers in the course bibliography
- The most recent papers normally come with replication files (most high ranking journals nowadays demand these files for publication)
- If not, **they will refer to the data they use** somewhere in the paper and you can always google it! This usually works
- Now that you have R and you know the basics, you can repeat this exercise with other datasets

- Look at the papers in the course bibliography

 - Review some demand-side factors that explain party system change/continuity
 - 2 Review some supply-side factors that explain party system change/continuity
- You will also have to present your work
- Finally, we will review what we have discussed together

• There are three final things that we must take care of now:

- There are three final things that we must take care of now:
 - 1 Sort out the presentations

- There are three final things that we must take care of now:
 - 1 Sort out the presentations
 - 2 Get your feedback on the course so far

- There are three final things that we must take care of now:
 - 1 Sort out the presentations
 - 2 Get your feedback on the course so far
 - 3 Is there anything that you would like to discuss in the next session that is not included on the syllabus?

- There are three final things that we must take care of now:
 - Sort out the presentations
 - 2 Get your feedback on the course so far
 - 3 Is there anything that you would like to discuss in the next session that is not included on the syllabus?
- Would you like a different arrangement for the rest of the sessions?

That's all!

Many thanks!
